

| Partner Name | ALESAMONTI SRL | Short name | ALESAMONTI | number | 01 |
|---|----------------|------------|------------|--------|----|
| Short Description | | | | | |
| <p>ALESAMONTI s.r.l. is a “family company” founded by Eugenio Monti, who started in 1956 with the production of indexing gears and turning tables for boring and milling machines. In 1961 the first boring machine type MB63 has been designed and produced with a boring spindle of diameter 63 mm. At the same time the company equips itself with its own production means to be able to realize within the company all the mechanical parts of the boring machines. Consequently the production division of light and heavy mechanical parts grows as well as the mechanical and electrical assembling division. In 1972 the first milling machine has been designed and in 1974 the first numerical control has been applied on all machine tools. Today ALESAMONTI is present on the market with a fifty-year experience as builder of a wide range of products (boring, milling and drilling machines) and accessories, wide enough to satisfy demanding customers requests and to guarantee a solid, reliable high quality product. All this due to a strict control of the complete working cycle in its own electrical/mechanical working and assembling divisions as well as an accurate electrical and mechanical design that keeps the products constantly up-dated. In the latest years, ALESAMONTI has deployed significant investments to greatly increase the knowledge-based component of its product line.</p> | | | | | |
